Scatter	plots are												

by _____

Even though a lot of data from real life does not EXACTLY follow a specific pattern, you can often see a

______ is a line on a scatterplot that models this

correlation. It should have _____

(1) Describe the correlation for the Empire viewer data.

(2) If you drew a trend line to model the Empire viewer data, what kind of slope would it have?

(3) What does this correlation actually *mean*? Write a complete sentence.

If we can draw a trend line on a scatterplot, we can write a linear equation to **model** the data.

- <u>Steps</u>
- 1) Sketch trendline same number of points above and below.
- 2) Choose two points **on the line** and calculate slope.
- 3) Use one point and the slope to write in point-slope form.
- 4) Solve for y to write in slope-intercept form.

Does the slope we have make sense? Why?

Does the y-intercept we have make sense? Why?

Draw and write a linear equation for the trend line of the data.

Does the slope make sense? Does the y-intercept make sense? Why?
